DETAILED ACTION

Page 2

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 3, 21-23, 34, and 36, drawn to a method for inhibition of carbon flow in the glycolytic direction in a cell, classified in class 800, subclass 284, for example.
- II. Claims 5, 34, 36, and 99, drawn to a method for the stimulation of photosynthesis in a cell, classified in class 536, subclass 23.2, for example.
- III. Claims 6, 34, 36 and 100, drawn to a method for the stimulation of sinkrelated activity, classified in class 435, subclass 69.1, for example.
- IV. Claims 8, 34, 36 and 101, drawn to a method for obtaining a dwarfed organism, classified in class 800, subclass 290, for example.
- V. Claims 34, 36, and 47 drawn to a method for the prevention of cold sweetening, classified in class 536, subclass 23.7, for example.
- VI. Claims 34, 36, and 48, drawn to a method for the inhibition of invertase in beet after harvest, classified in class 435, subclass 468, for example.

The inventions are independent or distinct, each from the other because:

Inventions I-VI are unrelated to one another. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant

Art Unit: 1638

case, the different inventions have different designs, different modes of operation and different effects.

Invention I requires method steps, enzymatic properties and screening processes all relating to carbon flow in the glycolytic direction in a cell, not required by any other invention.

Invention II requires method steps, enzymatic properties and screening processes all relating to the stimulation of photosynthesis in a cell, not required by any other invention.

Invention III requires method steps, enzymatic properties and screening processes all relating to the stimulation of sink-related activity, not required by any other invention.

Invention IV requires method steps, enzymatic properties and screening processes all relating to a dwarfed organism, not required by any other invention.

Invention V requires method steps, enzymatic properties and screening processes all relating to the prevention of cold sweetening, not required by any other invention.

Invention VI requires method steps, enzymatic properties, and screening processes all relating to the inhibition of invertase in beet after harvest, not required by any other invention.

For the reasons given above, Inventions I-VI are all distinct from one another and restriction is therefore proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brent Page whose telephone number is (514)-272-5914. The examiner can normally be reached on Monday-Friday 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Anne Marie Grunberg can be reached on (571)-272-0975. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
